

Treading lightly

A respect for the environment is backed up by the manufacturing and finishing processes used by Bertch Cabinet Manufacturing

Good product design implies products that are manufactured to be aesthetically pleasing, functional and, most importantly, long lasting.

And, in the case of cabinetry designed and built by family-owned and -operated Bertch Cabinet Manufacturing, it also means products that reflect the company's commitment to reforestation and recycling, and a general respect for the environment.

Bertch produces all its own components and utilizes an eco-friendly finishing technology that minimizes emissions. The

company also generates its own electricity from sawdust, and each year plants thousands of trees to help preserve the Earth's natural resources. For all these initiatives, Bertch has achieved certification in the Environmental Stewardship Program (ESP) from the Kitchen Cabinet Makers Association.

Cabinetry styles from Bertch are

This page: Kitchens made by Bertch Cabinet Manufacturing are built to ensure a quality product and to have minimal impact on the environment.

diverse, with designs ranging from the ornately traditional to minimalist contemporary – and everything in between. Custom finishes and features ensure the choices for homeowners are unlimited.

Bertch also makes environmentally friendly cabinetry for bathrooms, laundries, closets and living rooms.
